Re: Revised Feasibility Study Report for the L. E. Carpenter  
Company (aka Dayco Corporation) Site in Wharton, NJ

Dear Ms. Purcell:

The November 1992 Revision of the Feasibility Study Report for the L. E. Carpenter Company Site has been circulated within EPA for review. As of this date, I have received only one memorandum commenting on this document. Enclosed for your information is one copy of the December 17, 1992 memorandum from Andrew Bellina of EPA's Hazardous Waste Facilities Branch. This memorandum does not identify any deficiencies in the report and is generally supportive of the two remedial alternatives recommended in the report (Alternatives 3 and 4). However, a preference is expressed for the remedial alternative involving reinfiltration to promote in situ bioremediation (i.e., Alternative 4), provided that this option can be implemented in a protective manner. I share this preference.

Feel free to contact me at 212 264-8098 if you wish to discuss this matter.

Sincerely yours,

Jonathan Josepfs, Project Manager  
New Jersey Superfund Branch II  
Emergency and Remedial Response Division

Enclosure
